EMAIL SECURITY CHECK

Kingsley Optometry

Harbour IT

DOMAIN	CHECKED	BASED ON	PREPARED BY
kingsley-optometry.example	4 October 2026	Public DNS records	Harbour IT

C

Email authentication is in place but not enforced, so spoofed mail can still get through.

The grade shows whether someone else can send email that looks like it comes from kingsley-optometry.example. A means it's prevented, C means only partly, F means it isn't.

What we found

Area	Finding	Severity
SPF	SPF doesn't end in -all or ~all, so it doesn't reject anything	Medium
SPF	SPF includes bulkmail.example, but it has no SPF record, so SPF fails for all mail	Medium
DMARC	DMARC is monitor-only (p=none); spoofed mail is still delivered	Medium
DKIM	Microsoft 365 DKIM isn't set up (selector1, selector2 CNAME missing)	Medium
DMARC	DMARC has no rua= address, so nobody sees the reports	Low
MTA-STS	No MTA-STS policy, so mail sent to this domain can be forced onto an unencrypted connection	Low

The details

EMAIL AUTHENTICATION	
Mail is received by	Microsoft 365
SPF	v=spf1 include:spf.protection.outlook.com include:bulkmail.example ?all 2 DNS lookups; the limit is 10
